

CHURCH

professional lighting of sacred buildings

more than **20 years** of experience and market presence

Lighting in churches, in addition to utility functions: ensures the visibility to the faithful, ensures good reading conditions for priests and the faithful, it should also create an atmosphere favouring the concentration and prayer. Lighting can also perform decorative functions. It allows extracting architectural values, also it allows visitors to see important historical elements.

more than **20 years** of experience and market presence

Modern LED lighting allows for the protection of monuments (no UV radiation, much lower temperatures than traditional light sources), energy-efficient illumination of the temple itself and rooms such as sacristies, magazines, etc. The best way to design a temple lighting system is to get us to know the premises itself, getting to know its special features and performing lighting tests.
